dev@tituscoleman.com

Full-stack engineer who designs and ships internal developer tooling end to end: Go and TypeScript services, relational data models, and the Kubernetes and Terraform infrastructure they run on. At Vast I built Grove, a Kubernetes-native platform that manages self-hosted macOS CI runners, and a self-service Active Directory password portal, alongside reusable Terraform modules other engineers consume. Comfortable taking ambiguous problems from data model and API design through containerized deployment, OIDC/SAML authentication, and production monitoring.

 GitHub  LinkedIn

SKILLS

Programming Languages: Go, TypeScript, Bash, Rust, Swift, HTML, CSS

Libraries / Frameworks: React, Vite, Node.js, REST APIs, Tailwind CSS

Infrastructure & Tools: Docker, Kubernetes, Helm, Terraform, Packer, AWS, GCP, PostgreSQL / MySQL, GitHub Actions, Grafana, Artifactory, SAML & OIDC, Git, Linux, CMMC compliance baselines

PROJECTS

Grove — macOS CI Runner Platform

Go · TypeScript · Aurora PostgreSQL · K8s · Helm

Vast Internal Solution

- Kubernetes-native web application that manages self-hosted macOS GitHub Actions runners: listens for jobs from the company's self-hosted GitHub, provisions an ephemeral VM per job on each macOS host, monitors VM metrics, and drives Packer image builds from a GUI — collapsing the operational complexity of macOS runners into a single tool.
- Designed as two independently deployed containers — a Go backend-for-frontend over Aurora PostgreSQL serving a Vite/TypeScript frontend, and a separate runner service that talks to the GitHub App — decoupling runner provisioning from the BFF.
- Google Workspace OIDC for authentication, Artifactory as a dependency proxy, and Helm-chart deployment.
- Sole engineer on design and implementation; supersedes ephemeral-macos-runner, an earlier reference implementation documenting the manual deployment requirements Grove automates.

AD Password Portal

.NET · LDAPS · Vite · SAML · Docker

Vast Internal Solution

- Employee-facing self-service password portal integrating with Active Directory over LDAPS via .NET libraries, removing help-desk involvement from routine password resets.
- Authenticated with SAML against Google Workspace and deployed behind a reverse proxy handling rate limiting; logs to stdout/stderr for container-native collection.
- Built the portal and AD integration; one teammate assisted with the SAML integration. Shipped as a Docker image.

VS Code Extension Inventory

Go · Jamf Pro API

Vast Internal Solution

- Go tool that fans out concurrent calls to the Jamf Pro API and its extension attributes to inventory every VS Code extension installed across the company's macOS fleet, turning per-device data into a single CSV file.

Reusable AWS EC2 Terraform Modules

Terraform · AWS · Grafana Alloy

Vast Internal Solution

- Linux and Windows EC2 modules consumable by any engineer, automating domain join via AWS Runbooks, Grafana Alloy logging and metrics, and security-group ingress/egress — versioned through CI and published to Artifactory.

RELEVANT WORK EXPERIENCE

IT System Administrator

Long Beach, CA

Vast, Inc.

08/2024 - Present

- Architect and deploy FIPS-compliant infrastructure-as-code in AWS GovCloud using Terraform, covering IAM, networking, storage, monitoring, and disaster recovery — version-controlled and reviewed like application code.
- Build automation and internal tooling that replaces manual operational workflows across a mixed Linux, Windows, macOS, and iOS/iPadOS fleet managed with JumpCloud, Jamf Pro, Active Directory, and Google MDM.
- Define and report service metrics, and maintain technical documentation in Confluence with project tracking in Jira, giving engineering leadership visibility into system health and delivery.
- Implement and maintain technical controls aligned with NIST 800-171 Rev 2 and CMMC, conducting security assessments and preparing audit documentation.
- Identify and remediate critical vulnerabilities through systematic patch deployment, with continuous scanning and validation to verify remediation.

Account Manager

Los Angeles, CA

Solid Commerce

11/2016 - 03/2018

- Integrated third-party marketplace APIs with an internal inventory management platform, translating client requirements into working account-specific technical solutions.
- Served as primary technical point of contact for a book of premium ecommerce accounts, debugging integration issues and relaying reproducible bug reports to engineering.
- Managed on-boarding and training for new clients to ensure seamless platform adoption and successful merchant activation.

Systems Administrator

Los Angeles, CA

Lunarpages.com (acquired by HostPapa)

07/2007 - 04/2012

- Scripted and automated server builds, backups, reporting, and routine maintenance, cutting repetitive manual work across shared, VPS, and dedicated server platforms.
- Managed the full lifecycle of customer hosting accounts from provisioning to decommissioning.
- Provided Tier 3 support, troubleshooting hosting, domain, email, database, and control panel issues at the system level.
- Assisted with capacity planning, infrastructure upgrades, and testing of new hosting platforms and technologies.
