

Titus Coleman

Montebello, CA USA
626-252-6821
dev@tituscoleman.com

Cloud-native engineer developing solutions from concept to data model and API design through to production.

 [GitHub](#)  [LinkedIn](#)

SKILLS

Programming Languages: Go, TypeScript, Bash, Rust, Swift, HTML, CSS

Libraries / Frameworks: React, Vite, Node.js, CSS

Infrastructure & Tools: Docker, Kubernetes, Helm, Terraform, Packer, AWS, GCP, Google Workspace, PostgreSQL / MySQL, GitHub Actions, Grafana, Artifactory, SAML & OIDC, Git, Linux, CMMC compliance baselines

PROJECTS

AWS Research and Engineering Studio: Engineering VDI

[AWS RES](#) · [Terraform](#) · [EC2](#) · [EFS](#)

Vast Internal Solution

- Deployed AWS Research and Engineering Studio to give engineers on-demand virtual desktops sized for Thermal Desktop and Matlab.
- Automated the VDI image builds so desktops provision from a repeatable, versioned image instead of manual per-machine setup.
- Mapped per-user EFS volumes into each session so files follow engineers onto any desktop.
- Managed networking, IAM, storage, and supporting resources as Terraform.

Grove: macOS CI Runner Platform

[Go](#) · [TypeScript](#) · [Aurora PostgreSQL](#) · [K8s](#) · [Helm](#)

Vast Internal Solution

- Full-stack platform for self-hosted macOS GitHub Actions runners: provisions an ephemeral VM per job on each macOS host, records per-VM time-series metrics, and drives Packer image builds from a GUI.
- Designed the Aurora PostgreSQL data model (hosts, jobs, VM lifecycle, metrics) and the REST API contract the frontend consumes.
- Two independently deployed containers: a Go backend-for-frontend serving a Vite/TypeScript frontend, and a runner service talking to the GitHub App.
- Google Workspace OIDC, Artifactory dependency proxy, Helm deployment on Kubernetes.

Custom Networking EKS cluster migration

[AWS](#) · [Karpenter](#) · [ArgoCD](#) · [Kubernetes](#)

Vast Internal Solution

- Migrating clusters to utilize CGNAT cidr range to alleviate IP exhaustion
- Coordinating with various stakeholders to minimize downtime to scheduled maintenance periods and ensure continued communication with services.
- All changes committed with Terraform via Spacelift and manifests deployed via ArgoCD.

Reusable AWS EC2 Terraform Modules

[Terraform](#) · [AWS](#) · [Grafana Alloy](#)

Vast Internal Solution

- Linux and Windows EC2 modules consumable by any engineer, automating domain join via AWS Runbooks, Grafana Alloy logging and metrics, and security-group rules. Versioned through CI and published to Artifactory.

RELEVANT WORK EXPERIENCE

IT System Administrator

Long Beach, CA

Vast, Inc.

08/2024 - Present

- Serving a mixed Linux, Windows, macOS, and iOS/iPadOS fleet managed with Puppet, JumpCloud, Jamf Pro, Active Directory, and Google MDM.
- Architect and deploy FIPS-compliant infrastructure-as-code in AWS GovCloud using Terraform, secure IAM, networking, storage, monitoring, and disaster recovery. Strictly Version-controlled and reviewed like application code.
- Instrument systems with Grafana-based logging and metrics and report on service health, giving engineering leadership visibility into system health and delivery; document in Confluence with project tracking in Jira.
- Implement technical controls aligned with NIST 800-171 Rev 2 and CMMC, and remediate critical vulnerabilities through systematic patch deployment with continuous scanning and validation.

Account Manager

Los Angeles, CA

Solid Commerce

11/2016 - 03/2018

- Integrated third-party marketplace APIs with an internal inventory management platform, translating client requirements into working account-specific technical solutions.
- Served as primary technical point of contact for a book of premium ecommerce accounts, debugging integration issues and relaying reproducible bug reports to engineering.
- Managed on-boarding and training for new clients to ensure seamless platform adoption and successful merchant activation.

Systems Administrator

Los Angeles, CA

Lunarpages.com (acquired by HostPapa)

07/2007 - 04/2012

- Scripted and automated server builds, backups, reporting, and routine maintenance, cutting repetitive manual work across shared, VPS, and dedicated server platforms.
- Managed the full lifecycle of customer hosting accounts from provisioning to decommissioning.
- Provided Tier 3 support, troubleshooting hosting, domain, email, database, and control panel issues at the system level.
